

Chapter I · Uniform Project Planning

Uniform Supplier Evaluation Checklist

1 | Has the provider previously produced **Uniforms** for your line of work?

Even if the vendor you selected initially seems reasonable, if they don't have specific experience in your company's industry, or if your sector requires technical standards for **Uniforms**, think twice. This inexperience may have a major impact later on, while the project is ongoing.

To reduce risks, think about choosing a partner with extensive experience in producing **Uniforms** for your sector of work.

For instance, SKYPRO has completed successful projects for hundreds of clients globally in a variety of specialized industries, including aviation, ground handling, cruising, hospitality, security, healthcare, casinos and retail, among others. We are trustworthy and reputable professionals in **Uniform Management**.

2 | Does the supplier have the expertise to **design** and use **proper materials** for the manufacture of **Uniforms**?

Creating **Uniforms** for technical professions requires much more than just designing stylish attire in line with the brand's identity. In these cases, a **Uniform** must be made to be a functional piece of clothing for usage in specific workplace contexts.

Making **Uniforms** is a difficult undertaking with numerous factors, including:

- Aesthetic-formal standards and appearance styles;
- Performance;
- Stability & Safety
- Choice and specification of materials (such as durability, impermeability, flexibility and breathable fabrics, among others);
- Production processes and methods.

[SKYPRO](#) knows from experience that **Uniforms** are not just about looking good, but also about being functional. Therefore, our garments are created based on the concept of Functional Design.

They assist professionals in performing their duties without endangering their [health and well-being](#). Our knowledge of [unhealthy substances for workers' health](#) and how to avoid them enables us to design **Uniforms** that safeguard the body while at work. [Each fabric, leather, pattern and style of construction is thought to guarantee the protection of the professional.](#)

3 | Will the supplier manage all the Uniforms processes?

If you are satisfied with your current **Uniform Management** process then your supplier will only look after the production and delivery of **Uniforms**.

However, a new **Uniform Project** presents a strong opportunity to review the current process, identify challenges and costly activities and develop solutions to improve efficiency.

SKYPRO offers end-to-end **Uniform Management** services, including a **Uniform Management System**, [mySKYPRO Portal](#), which will manage all processes for you, in a sustainable, technological and automated way.

This means [SKYPRO](#) will:

- Handle the Design and the production of the **Uniform**;
- Manage the Supply Chain;
- Control garments stocks;
- Assure size assessment;
- Allow self-ordering for workers;
- Delivery the garments in the company or at the employee's address;
- [Predict demand forecasting by using smart algorithms](#), to stop further pointless purchases;
- Provide insights by dashboards.

Our goal is to provide comprehensive, integrated solutions that make use of the most cutting-edge analytics and intelligence technologies available right now.

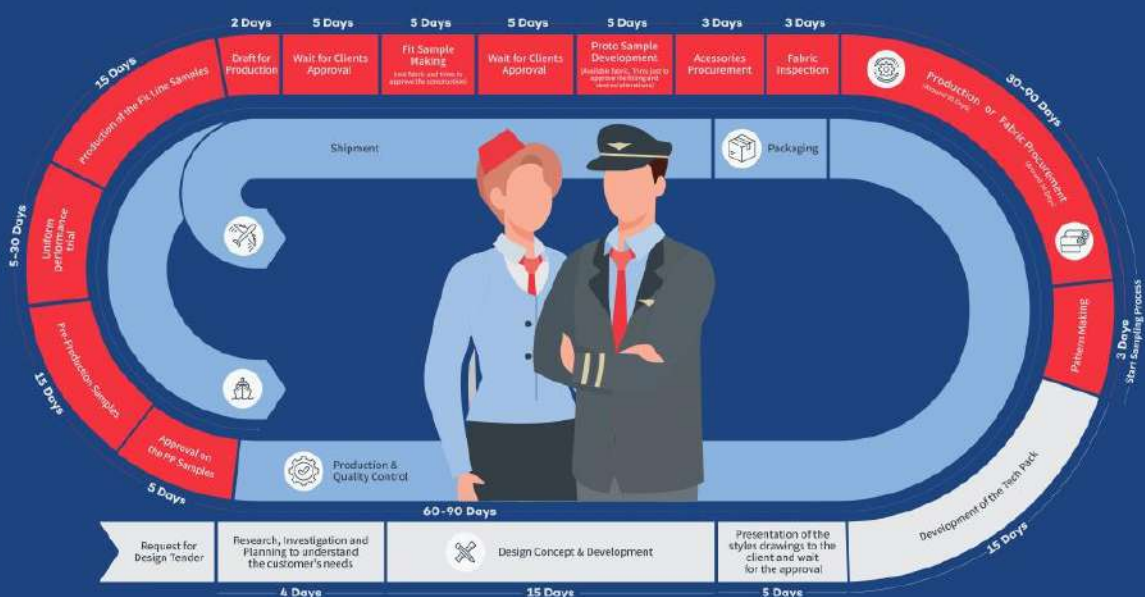

4 | Does the supplier have a **Project Management map** with detailed information?

Your supplier must be able to control all stages of the **Uniform Project**, for instance:

- Clarify production and delivery deadlines;
- Document the project scope and final approved sketches;
- Provide schedule of deliveries, corrections and approvals, both by the purchasing company and by the supplier company;
- Create flawless Technical Sheets with all raw materials, compositions and trims. Remember to ensure that all items are physically, chemically and usability tested, not jeopardizing the health and safety of crews.

At **SKYPRO**, we have developed our own Creative System for **Uniform Production**, in which we describe, step by step, all the phases and estimated deadlines involved in the **Uniform Project**.

SKYPRO Creative System to Uniform Production Project Map

5 | Does the vendor offer [sizing sessions](#) so that employees can find clothing that is the correct fit?

Once the **Uniform** Golden Sample is ready, employees can access our **Uniform Management System (UMS)**, called mySKYPRO, and schedule their Size Assessment Session at their company, at a convenient time.

During the Size Assessment Session, a tailor carries out the work of finding the best size match for each worker, so that everything arrives in the perfect size.

Since it is a completely controlled process, size errors when reordering the entitlement are significantly reduced.

6 | Does the supplier care about [Sustainability](#)?

This can be surprising, but did you know that the way you make **Uniforms** can help you lower your ecological/environmental footprint? However, this will only occur if you have the right partnerships. Most businesses are still unaware of the benefits of working with [a responsible Uniform Supplier to help them meet their sustainability goals](#) and [lower their impact](#). As a result, they wind up engaging manufacturers who frequently use materials created using unsustainable resources or methods that harm the environment.

This can be a risk if your company prioritizes Sustainability or has challenging Sustainability goals to meet. The right **Uniform Manufacturer** must be able to develop and supply a wide range of garments made out of durable and sustainable fabrics, always keeping in mind their design. It is vital that you choose the best suppliers for the job. To ensure **Uniforms** will be sustainable, here are [5 questions you should ask your supplier](#).

At [SKYPRO](#), for instance, you will find a large range of suppliers, who work with sustainable materials, and a team of experts developing the most [sustainable methods of Uniform Manufacturing](#), always keeping in mind that you have very challenging ecological/environmental footprint reduction goals.

[SKYPRO ECOLOGIC](#) is a whole **Uniform** product line that supports sustainable practices by prioritizing:

- Eco-friendly quality raw materials;
- Less consumption of chemicals, water and energy;
- Reduction of conventional fibers by using low-impact materials;
- Substituting leather where possible with vegan materials;
- Suppliers who use 100% recycled water and 100% solar energy production systems;
- The usage of recycled packaging;
- Eco-materials in the entire life cycle of the **Uniforms** we produce;
- Durable and recycled fabrics.

[SKYPRO](#) constantly prefers to provide **Uniforms** out of [environmentally friendly raw materials that are produced sustainably](#). In addition, our **Uniform** is well planned and manufactured, [so it can contribute to the reduction of the company's impact](#).
